- ▶ Refurbishment of the outside lighting columns
- ▶ Shower and jet-wash system installed

### DATE

Sep 2016 – Oct 2016

### PROJECT VALUE

£40,000

## PLANT HIRE DEPOT - GAP

The works consisted of a full electrical installation to warehouse and office. The warehouse was installed with 110v power supply for hire appliances and accessories and a 230v power supply for general sockets inside the warehouse and offices.

This included a Fire Detection system to Level L2, an Intruder Alarm and external flood lighting. The electrical installation in the office was fitted with full data connections throughout. This allowed for a computer system to be installed by others after installation.

A new LED lighting system was installed within the warehouse and general offices. The system included an emergency lighting system throughout.

At the request of the client, Retroflo also refurbished the outside lighting columns with new LED fittings, installed a shower in the general office toilet, and installed a full jet wash system to the compound for general use of washing down appliances and accessories after they have returned from hire.
